

# Space

Aneeta Sashless Windows are an intelligent and harmonious solution for all building environments.

Slim lines, concealed locks

&

and aluminium or timber frames and covers create subtlety within your whole

building context. Unobtrusive

and minimalist, Aneeta aims to

complement your design landscape,

rather than dominate it.

sashless window systems

**smart &** Aneeta Sashless Windows are designed to be sympathetic to the uniqueness of each building. They are remarkably versatile in either new or existing structures and do not need close tolerances to work perfectly. The rigid centre metal track provides improved noise and weather insulation. With double-glazing this is an excellent acoustic and thermal application. Designed to withstand significant stress from movement, pressure or weather. Outdoor walkways are safe due to the vertical action of the window. Concealed locking fixture

**style &** Aneeta Sashless Windows have been designed to adapt to all your design needs present and future. Easy installation in tight or unusual spaces. Aluminum side covers snap on. PVC slides have self aligning grooves and large anti-jamming sliding clearance. Frame colour can change to suit future renovations.

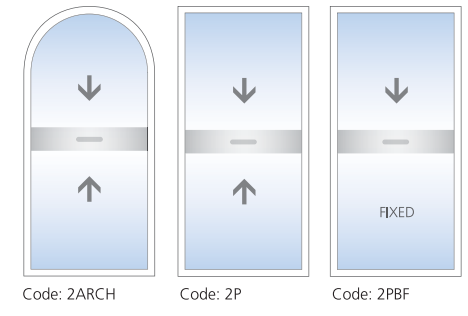

**living**

## Variations

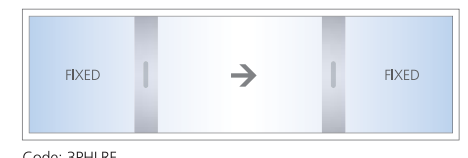

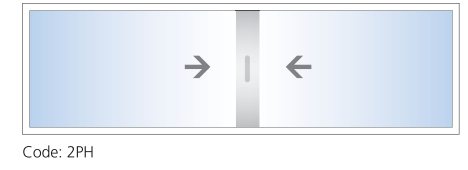

### Quality

Aneeta Windows are a manufacturer of high quality sashless windows. Most of our components are Australian made. All our products are tested by N.A.T.A. approved testing facilities. Our sashless units are also tested, inspected, certified and accredited under the Australian Window Association's auditing program. A 7 year warranty is provided for all our products and backed by our second-to-none service departments.

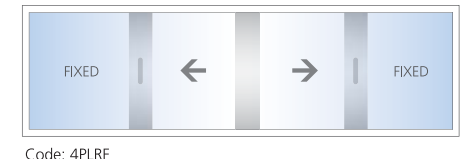

### Glazing

We offer a wide arrangement of glazing options in different glass thicknesses. In single glazing the minimum is 6mm and maximum up to 10.76mm. These types of glass can be float, toughened or laminated. Our double glazed units are 16mm thick "Insulated Glass Units". All glazing is carried out to meet wind loading and human impact safety glazing requirements as set out in AS 1288 - 1999.

### Security

Our glass range from 6mm to 10.76mm in single glazing and 16mm in double glazing combined with our single keyed alike lock with multi position provides added security.

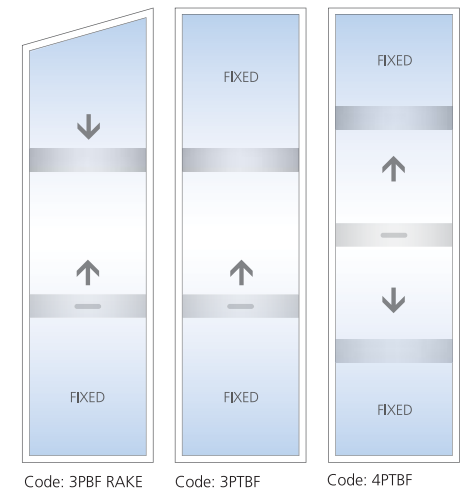

### Noise

By using thicker glass or "double glazing", the protection against noise pollution is increased significantly over standard glass. Aneeta Sashless Windows combined with an outer aluminum awning frame can provide a "Sound Transmission Classification of 45. Our sashless units are approved by the federal Government for use on the Sydney Airport Noise Insulation Project. For more detailed information or specific test results, contact our technical department.

### Comfort

To be comfortable all year round, we recommend you choose our new and improved "Double Glazed" units. With a wide selection of glazing options, you are able to select the best possible solution that suits your needs. Aneeta Windows are an accredited Member of the "Window Energy Rating Scheme" (W.E.R.S.). For more detailed information or specific test results, contact our technical department.
